EDUCATION

M.Tech AI & Data Science (Cybersecurity Specialization), NFSU Goa Campus 2025 — Present

- Specialized coursework in cybersecurity, digital forensics, embedded systems security, and threat modeling
- Focus on connected vehicle security, IoT security architectures, and ML driven anomaly detection

B.E. Computer Engineering, Savitribai Phule Pune University 2021 — 2025

- Organized cybersecurity awareness workshops and digital literacy programs for students and faculty

KEY PROJECTS

Digital Evidence Management System using Blockchain

Tamper proof chain of custody platform for law enforcement & forensic agencies digital forensics and cybercrime investigation mandate

Technologies: Solidity Smart Contracts, Web3.js, Flask, JavaScript, Ganache Blockchain, SHA 256

AI Powered Network Intrusion Detection System

[Live Demo](#)

Real time ML based threat detection system for network traffic analysis — applicable to police network security monitoring and cyber investigation infrastructure

Technologies: Python, Scikit learn, Pandas, NumPy, Streamlit, Feature Engineering

Fingerprint Pattern Classification and Minutiae Analysis Using Deep Learning for Forensic Applications

Implemented Level 1 pattern classification (Arch, Loop, Whorl) and Level 2 minutiae extraction (Ridge Endings, Bifurcations). Built core and delta point detection algorithms for advanced forensic matching.

CERTIFICATIONS

Google Cybersecurity Professional Certificate

- Completed 8 course program covering threat detection, network security, incident response, and SIEM tools
- Hands on experience with Linux, SQL, Python scripting for security automation, and security frameworks (NIST, CIA Triad)

CASA Certified API Security Analyst

- Industry recognized certification validating expertise in API security testing and secure API design
- Covers OWASP API Security Top 10, authentication flaws, injection attacks, broken access control, and rate limiting

UGC NET Computer Science & Applications

- Achieved 89.28 Percentile national level validation of core CS and cybersecurity knowledge

TECHNICAL SKILLS

Programming Languages: Python, C/C++, JavaScript, SQL, Solidity, HTML/CSS

Cybersecurity & Forensics: Penetration Testing, Digital Forensics, Threat Modeling, Risk Assessment, Vulnerability Assessment, Incident Response, Chain of Custody Handling

Security Tools: Wireshark, Nmap, Tcpdump, Autopsy, Burp Suite, Cisco Packet Tracer

Network & Protocols: TCP/IP, UDP, SNMP, BGP, OSPF, VLANs, Network Traffic Analysis, Packet Analysis

Blockchain & Cryptography: Solidity, Web3.js, Ganache, Smart Contracts, SHA 256, Cryptographic Hashing

Machine Learning & AI: Scikit learn, TensorFlow, Pandas, NumPy, Anomaly Detection, Feature Engineering

Embedded & IoT Security: Linux (Ubuntu), Embedded Security, IoT Security Architectures

Development Tools: Git, Flask, Streamlit, REST APIs, Docker, VS Code
